PROFESSIONAL SUMMARY

Senior Quality & Automation Engineer with **17+ years** building **CI/CD-integrated test platforms for distributed enterprise systems**. Designed UI and API automation frameworks, drove root-cause analysis for backend data and integration issues, and embedded automated regression into Jenkins pipelines across quarterly enterprise releases. Hands-on with **Java, Python, AWS, Docker**, and **AI-assisted engineering workflows** using Claude Code and GitHub Copilot — applying these strengths toward DevOps, CI/CD, and quality engineering roles in data-intensive and AI/ML environments.

CORE SKILLS

Languages	Java, Python, JavaScript, SQL
CI/CD & DevOps	Jenkins, Maven, Gradle, Docker, Git/GitHub, AWS (S3, Lambda), Shell Scripting
Test Automation	Playwright, Selenium, REST Assured, API/UI/Integration Testing, Framework Architecture
Distributed Systems	Trino, REST APIs, Pagination & Metadata Validation, Connector Frameworks, Backend Integration Testing
ServiceNow Platform	Flow Designer, IntegrationHub, Zero Copy Connector (ZCC)
Engineering Practices	Root Cause Analysis, Distributed Systems Debugging, AI-Assisted Development (Claude Code, GitHub Copilot), Prompt Engineering, Mentorship

PROFESSIONAL EXPERIENCE

ServiceNow — Senior Software Quality Engineer

2020 – Present

- ▶ Designed and scaled UI and API automation frameworks using **Playwright, Selenium, and REST Assured**, expanding regression coverage and shortening execution time across multiple enterprise platform modules.
- ▶ Embedded automation into **Jenkins CI/CD pipelines** so that every build validated core platform workflow, replacing manual regression cycles (~40%) with continuous validation across quarterly releases.
- ▶ Led **migration from a legacy Selenium harness to a Playwright-based framework**, improving execution scalability, parallelization, and automation standards across multiple engineering teams.
- ▶ Drove **root-cause analysis for distributed backend issues** across Trino query execution, Flow Designer workflows, IntegrationHub, and Zero Copy Connector (ZCC), reducing recurring defect classes and strengthening release stability.
- ▶ Built **backend integration validation** for ServiceNow data systems — covering pagination handling, metadata configuration, connector behavior, and cross-service data workflows.
- ▶ Adopted **Claude Code and GitHub Copilot** to accelerate debugging, test scaffolding, and code review; built prompt-driven utilities that materially improved engineering velocity on repetitive automation tasks.
- ▶ Mentored junior engineers on automation architecture, debugging, and CI/CD best practices, contributing to team-wide standardization initiatives.

Intuit — Senior Software Quality Engineer

2016 – 2020

- ▶ Built and maintained UI and API automation frameworks for enterprise financial applications, supporting compliance-sensitive release cycles.
- ▶ Embedded automated regression into CI pipelines so that every build validated core financial workflow, materially reducing manual test load before each release.

- ▶ Designed **REST API validation layers and contract tests** that caught backend regressions earlier in the cycle, improving production stability for cloud-hosted services.
- ▶ Built validation utilities on **AWS (S3, Lambda)** to support backend integration testing, test-data provisioning, and event-driven workflow verification.
- ▶ Partnered with developers, SREs, and product engineering across globally distributed teams to harden release readiness and tighten the QA-to-production feedback loop.

Capgemini — Test Lead

2015 – 2016

- ▶ Led QA execution for an enterprise financial-services engagement, owning planning, estimation, and delivery across concurrent release tracks.
- ▶ Managed a **4–5 engineer QA team**, balancing manual and automated testing assignments and coaching engineers on automation adoption.
- ▶ Defined regression strategy, entry/exit criteria, and defect-triage processes used across multiple releases.
- ▶ Coordinated test execution and sign-off with onshore stakeholders and development leads, keeping releases on schedule despite competing priorities.
- ▶ Drove early-stage automation adoption within the team, introducing reusable UI test scaffolding to reduce manual regression load.

Cognizant — Software Quality Engineer

2011 – 2015

- ▶ Developed automation solutions for enterprise applications, expanding regression coverage and reducing repetitive manual testing.
- ▶ Supported large-scale releases through improvements to test stability, defect tracking, and quality assurance processes.
- ▶ Contributed to UI validation, backend testing, and release-support activities across several enterprise client engagements.

IBM — Quality Analyst

2006 – 2011

- ▶ Tested enterprise applications for large-scale client environments, applying structured QA processes across the delivery lifecycle.
- ▶ Collaborated with globally distributed teams to improve defect management, testing rigor, and release quality.
- ▶ Contributed to early-stage automation initiatives and cross-team quality engineering efforts.

TECHNICAL PROJECTS

- ▶ Prototyped **MCP (Model Context Protocol) server workflows** that connect AI assistants to developer tooling, exploring use cases for automated debugging and engineering productivity.
- ▶ Built **prompt-driven and RAG workflows on Claude Code and GitHub Copilot** that improved debugging turnaround, code-generation quality, and automation scaffolding speed.
- ▶ Created automation utilities and backend testing harnesses to streamline repetitive engineering tasks and accelerate validation of integration changes.
- ▶ Designed connector validation and troubleshooting workflows for metadata-driven integrations, including pagination behavior and cross-service data verification.

EDUCATION

Bachelor of Technology in Computer Science

2005

Techno India — West Bengal University of Technology
